### Equipment for mixing and dissolving liquids in the stream USJ-01M.

Equipment is used for mixing and dissolving liquids in the flow of the USJ-01M type, mixing in the stream from two to six separate components, in particular low-octane gasoline with VKD additives.

Equipment for serial production of automobile gasolines and diesel fuels of the USJ-01M is manufactured in Ukraine according to TU.U.13931214.007-99, matches the requirements of standards and has all the necessary approvals for use including:

- resolution № 160.00.53.29.53.1 from 17.07.2000 from Territorial Administration of the State Labor Protection Service;
- conclusion of the State Administration of Ecology and Natural Resources № 03-06/2427 from 10.10.2000;
- hygienic conclusion of the State Sanitary and Epidemiological Expertise № 03-05/1068 of 19.03.2001

Equipment is exploited indoors and outdoors under a canopy.

№	Technical characteristics	USJ-01M
	Number of mixible liquids	2 - 6
	Capacity of the mixer for the main liquid (water), m <sup>3</sup> / h, not less than	11 - 12
	The amount of additives in the mixture obtained %, not more than	45
	Quantity of liquid to be weighed, m <sup>3</sup> / h,	
	▪ 1st indicator	1 - 7*
	▪ 2nd indicator	0,2 - 1,0*
	▪ 3rd indicator	0,5 - 3,5*
	▪ 4th indicator	0,5 - 3,5*
	▪ 5th indicator, l/h	14 - 32*
	The visual installation of the consumption of components by the indicator changes the density of the mixture gasoline on, %	1,4
	Installed power, kW, not more than	15
	Primary fluid injection pressure, MPa	0,9 - 1,0
	The work of the CENNBS pump - under the gulf	
	Height of the mixture, m, max	10
	Overall dimensions, mm, not more than:	
	Equipment: length / width / height	1380 / 900 / 750
	Pump with trap: length / width / height	1100 / 500 / 600
	Weight, kg, not more than:	
	Equipment	95
	Pump with trap	250

Date is given while using one indicator. Indicator usage is indicated when the equipment is running on water

**-We develop emulsion for mulatons and supply chemical components for their production**
